SUMMARY OF THE FUNCTIONAL DESIGN DOCUMENT

EquipRite

Features, menus, pages, scenarios and flows, integrations, roles, reports and settings, from FDD v1.7 (RITE-FDD-EQUIPRITE-001, 08 Jun 2026)

3
modules: Foundation, Projects, Customers

5
lifecycle phases

35
scenarios with flows in this summary

20
integrations (INT-01–INT-20)

20
reports (RPT-01–RPT-20)

10
decision points (DP-01–DP-10)

17 Inconsistencies to resolve in the FDD

Prepared 29 Oct 2026 for the EquipRite redesign. Section numbers in brackets refer to the FDD. Where the FDD contradicts itself, section 17 lists it rather than picking a side.

1 EquipRite at a glance

EquipRite is a PaaS extension for Oracle Fusion Cloud ERP that manages the equipment lifecycle for construction, engineering and oil & gas project organisations: request from a catalog, allocation and approval, picking and shipping via Transfer Orders, usage timesheets, rate-based costing, intercompany and AR billing, and return (1.1). It covers heavy equipment, small tools, bulk items and consumables.

MODULE	WHAT IT CONTAINS	NEEDED
Equipment Foundation	Equipment master, rates, classes, settings, schedule, analytics, smart search, map view	Always
Equipment for Projects	Project requests, workbench, allocation, picking, TOs, project transactions, timesheets, approval, IC billing, returns	Optional
Equipment for Customers	Customer rentals, customer workbench, agreements (internal/external), AR invoices, customer billing	Optional

LAYER	TECHNOLOGY
UI	Oracle VBCS, Redwood UX
Logic	VBCS business objects and action chains
Integration	Oracle Integration Cloud for orchestrations; Fusion REST APIs for direct calls
Data	VBCS custom business objects
Reporting	OTBI and BI Publisher
Security	Fusion RBAC + VBCS security
Notifications	Fusion notifications / BPM (bell and email)

In scope (2.1)

- Equipment master with Inventory and Fixed Assets
- Optional rental agreements (internal, external, project, class)
- Rate schedules with six tiers
- Request cart, allocation (auto/manual), approval
- Initiate Picking (TO + reserve + pick release), optional job
- Gantt and map schedule
- Oracle mobile picking and shipping
- Optional inspections
- Weekly time entry and approval
- Costing, IC billing, AR invoices, PPM posting
- Return via reverse TO and settlement
- Analytics; role-based security

Out of scope (2.2) and later (2.3)

- Fixed Assets configuration
- IFRS 16 / ASC 842 lease accounting (later)
- EPM CapEx planning (later)
- Native mobile app (responsive web only); offline PWA later
- GPS / telematics, IoT usage (later)
- Operator HR management
- Barcode / RFID scanning at yards
- Predictive maintenance (later)
- Asset retirement and disposal, BR-010 (later)

Inventory organisations (3.3)

Equipment lives in an **Equipment Yard** inventory org (subinventories Available, Reserved, Maintenance) and moves to a **Project Site virtual org** through inter-org Transfer Orders; returns use a reverse TO. Project sites can have sub-inventories

(region/state/city) and locators per project, e.g. TEXAS.PRJ-2026-001 (7.17.2D). All of this is on only when TRANSFER_ORDERS_ENABLED = Yes for the business unit. Intransit ownership is FOB Shipment or FOB Receipt (OI-05).

2 Business requirements (4.1)

ID	REQUIREMENT	SUMMARY	FDD
BR-001	Master data	Equipment master with class, type, status, serial/lot; Inventory and Fixed Assets	7.2
BR-002	Rental agreements	Optional; internal (IC) and external (AR); by customer, project or class	7.3A, 5.1
BR-003	Rate schedules	Always on; six periods with thresholds; basis hourly/daily; method complete/utilized; taggable	7.3
BR-004	Request & allocation	Optional agreement link; serial auto/manual allocation; quantity check; Auto Allocate + Approve	7.5, 7.8
BR-005	Usage tracking	Daily/hourly usage, idle, downtime, utilization	7.13
BR-006	Maintenance & inspection	Planned/unplanned maintenance; optional inspection at ship-out	7.12
BR-007	Picking & fulfilment	Initiate Picking (TO + reserve + release), optional job, Oracle mobile	7.16
BR-008	Scheduling	Booked dates and locations; embedded in approval	7.10, 7.8
BR-009	Redeployment & transfer	Inter-project / inter-org transfers, audit	7.16A
BR-010	Retirement / disposal	Sell, return, scrap; book values (future phase)	—
BR-011	Data & integration	REST APIs, incremental/full loads, snapshots, audit trail	8.1
BR-012	Reporting	Utilization, cost vs budget, expiry alerts, ROI/TCO	7.4, 7.15
BR-013	Configuration	Flags for agreements, inspection, auto-picking, lead time	7.17
BR-014	Non-functional	Performance, migration, RBAC, 17 notification types	10, 11, 13, 14

3 Roles, tiles and access

ROLE (10.1)	CAN DO	SEES
Project Manager	Create/edit requests, dashboard, timesheets, analytics, start returns	Own projects (PPM membership)
Equipment Manager	Approve/reject, master data, schedule, inspections, settings	All projects, all equipment
Finance / AR	Cost transactions, approve timesheets, rate schedules, reports	All projects (read); own org rates
Operations Lead	Workbench, assignments, analytics, transfers, schedule	Assigned projects / regions
External customer	Portal only: catalog, requests, own invoices	Own customer account

Role codes are mapped to Fusion roles in Settings (7.17.2B): EQR_REQUESTER_ROLE, EQR_PROJECT_MANAGER_ROLE, EQR_EQUIPMENT_MANAGER_ROLE, EQR_TIMEKEEPER_ROLE, EQR_TIME_APPROVER_ROLE. Data rules (10.2): project isolation, org filtering, approval thresholds by class and value, rate editing for Finance only, full audit trail.

Launcher tiles by role (7.1.2)

ROLE	TILES
Project Manager	My Equipment Requests, Equipment Catalog, Equipment Schedule, Time Entry, Request Status (pie), Project Equipment Dashboard
Equipment Manager	Request Workbench, Initiate Picking, Equipment Master, Equipment Schedule, Inspection, Analytics, Inter-Project Transfer (if on), Configuration Settings
Warehouse Operator	Initiate Picking, Inspection, Equipment Master (read only)
Finance / Billing	Timesheet Approval, Post Costs, Rate Management, Rental Agreements (if on), Analytics
System Administrator	Configuration Settings (all tabs), Equipment Master, Analytics, link to Fusion user management

Page access (10.3)

PAGE	PROJECT MGR	EQUIPMENT MGR	FINANCE	OPS LEAD	EXT. CUSTOMER
Dashboard	View own	View all	View all	Assigned	—
Equipment Master	View	Full	View	View	—
Rate Management	View	View	Full	View	—
Request Cart	Full	View	View	View	—
Request List	Edit own	View all	View all	Edit assigned	—
Approve & Allocate	—	Full	—	—	—
Workbench	—	Full	View	Full	—
Initiate Picking	—	Full	—	—	—
Inspection & Ship-out	—	Full	—	—	—
Time Entry	Full	View	View	View	—
Timesheet Approval	Approve own	View	Approve all	—	—
Schedule	View	Full	View	Full	—

PAGE	PROJECT MGR	EQUIPMENT MGR	FINANCE	OPS LEAD	EXT. CUSTOMER
Analytics	Own	All	All	Assigned	—
Settings	—	Full	Partial	—	—
Customer Portal	—	On behalf	—	—	Own data

4 Menus and pages

Header (all pages)

Global **Region / Inventory Org** filter (from the user's Fusion org access, INT-20; multi-select; kept for the session; EMs can widen to all orgs), search, request cart, notification bell, user menu (profile, My Subscriptions, sign out) (7.1.1, 11.1).

Menu in the new app (redesign, by lifecycle phase)

GROUP	MENU ITEMS	FDD PAGES
Home	Home (by role)	7.1, 7.4
Request	New request, My requests	7.5, 7.6
Fulfil	Workbench, Equipment schedule, Initiate picking, Inspection, Receipt & returns, Transfers	7.11, 7.8, 7.10, 7.16, 7.12, 5.3–5.5, 7.16A
Usage & cost	Time entry, Timesheet approval, Post costs, Direct cost & inventory	7.13, 7.14, 7.14A, 7.9
Master data	Equipment, Rate schedules, Rental agreements	7.2, 7.3, 7.3A
Insights	Analytics	7.15
Settings	Configuration, Integration health	7.17, 9.4
External	Customer portal	7.18

Items hide by role (section 3) and by module flag: customer items need CUSTOMERS_MODULE_ENABLED, agreements need AGREEMENTS_ENABLED, inspection needs at least one inspection point, transfers need ENABLE_INTER_PROJECT_TRANSFER, the portal needs CUSTOMER_PORTAL_ENABLED.

Pages and their features

§	PAGE	WHO	KEY FEATURES
7.1	APPS launcher dashboard	All	Role-based tiles with live counts; KPI bar (active requests, deployed, pending approvals, overdue returns, utilization %); global Region / Inventory Org filter in the header
7.2	Equipment master	EM full; others view	Smart search, cascading filters, grid and map view, certifications (green/amber/red), maintenance light, attributes, long description, saved searches, full and selective sync, substitutes and bundles, TCO
7.3	Rate management	Finance full	Six rate periods with thresholds, spreadsheet-style grid, inline edit, negative-margin highlight, tags (customer, class, agreement, project, task, location), basis and method
7.3A	Rental agreements	Finance, EM	Internal or external customer, optional project/class scope, ACTIVE/DRAFT/EXPIRED/CANCELLED, 1,000+ lines on their own page, rate overrides by rate type, Create Request from lines
7.4	Equipment dashboard	PM, Ops Lead	Project-level KPI cards with drill-down
7.5	Equipment request cart	PM full	Catalog cards with availability, class/subclass menu, templates, frequently ordered together, cart review with line overrides, estimated cost, procurement requisition
7.6	Equipment request list	Own / all	Filters, soft/hard reserve colours, Edit, View, Cancel, Initiate Return, export, bulk cancel, My Requisitions

§	PAGE	WHO	KEY FEATURES
7.8	Approve & allocate	EM only	Header, lines, Auto Allocate, manual serial pick, embedded schedule, approve / reject
7.9	Project transactions	PM, Finance	Direct cost posting (7.9.1A) and project inventory consumption (7.9.2A)
7.10	Equipment schedule	EM, Ops Lead full	Gantt (day/week/month), reserve colours, maintenance blocks, certificate warnings, conflict detection, map view
7.11	Request workbench	EM, Ops Lead	Project and customer requests in one list, source filter, bulk approve/reject, procurement tab
7.12	Inspection & ship-out	EM	Check in/out, class checklists, photos, defects, PASS / CONDITIONAL / FAIL, work order
7.13	Time entry	PM / Timekeeper	Weekly grid, hours types, copy week, notes, downtime reasons, submit
7.14	Timesheet approval	PM own, Finance all	Bulk approve/reject, adjust with audit, variance colours, budget panel
7.14A	Post costs	Finance	Cost preview by line, bulk post to PPM, IC or AR billing
7.15	Analytics	By role	20 reports, shared filters, bookmarks, export, scheduled email
7.16	Initiate picking	EM	Approved requests, line-based picking, TO + reserve + pick release in one action, exceptions
7.16A	Inter-project transfer	EM	Source and destination requests, transfer lines, history
7.17	Configuration settings	EM, Admin; Finance partial	Tabs Administration / Warehouse / Project Site; flags, inspection matrix, BU and org mapping, transaction sources, classes, rate types, role mapping
7.18	External customer portal	Customers; EM on behalf	Login, dashboard, catalog, cart, my requests, my billing

5 End-to-end process (5.1–5.5)

Phase 1 · Agreement & rate setup

- Define categories, serial/lot control (Inventory)
- Set up rate schedules (always on)
- Set up agreements (optional)
- Approve and publish rates/agreements
- Manage equipment master, link Fixed Assets

Phase 2 · Request, allocation & approval

- Raise request (project/customer, optional agreement)
- Submit: DRAFT → IN_PROCESS, NTF-01
- Optional allocation: Auto Allocate or manual
- Approve: IN_PROCESS → APPROVED, or REJECTED

Phase 3 · Pick, ship & receive

- Initiate Picking: TO + reserve + pick release
- Optional automatic job
- Warehouse picks on Oracle mobile
- Optional inspection
- Ship confirm, Bill of Lading, in transit
- Receive per line at site; billing starts; DEPLOYED

Phase 4 · Usage, costing & billing

- Weekly timesheets
- Rate engine picks the rate period
- Timesheet approval (bulk)
- IC invoice or AR invoice
- Post to GL

Phase 5 · Return & settlement

- Return TO, site → yard
- Ship from site, receive at yard
- Post-return inspection, WO if needed
- Stop billing, reconcile, damage charges
- Final settlement, archive

Inventory movement (8.2)

#	STEP	EFFECT
1	Reserve	Yard: hard reserved
2	Pick release	Pick task created
3	Pick confirm	Yard on-hand deducted
4	Ship confirm	In transit
5	Receive at site	Site on-hand up
6	In use	Timesheets
7	Return ship	Site deducted, in transit
8	Receive at yard	Yard restored

6 Status lifecycles

Equipment request (5.6)

DRAFT → IN_PROCESS → APPROVED → PICK_INITIATED → PICK_RELEASED → EQP INSPECTION COMPLETE → SHIPPED → DEPLOYED → RETURNED → CLOSED · REJECTED → back to DRAFT

STATUS	REACHED WHEN	WHAT THE SYSTEM DOES
DRAFT	Created or saved	Validation, estimated cost
IN_PROCESS	Submitted	NTF-01; availability shown
APPROVED	Allocated or quantity-checked, approved	Soft allocation; listed on Initiate Picking
PICK_INITIATED	Initiate Picking ran	TO, hard reserve, pick release
PICK_RELEASED	Pick release succeeded	Warehouse picking
EQP INSPECTION COMPLETE	Inspection passed (optional)	Cleared to ship
SHIPPED	Ship confirmed	In transit
DEPLOYED	Received at site (per line)	Billing starts; time entry opens
RETURNED	Return completed	Billing stopped; settlement
CLOSED	Settlement done	Archived; equipment Available
REJECTED	EM rejected	NTF-03; can edit and resubmit

Line-level statuses also include INSPECTION_FAILED (DP-03). Cancelled requests (DRAFT or IN_PROCESS only) are hidden by default (7.6.3).

Timesheet (7.14.2)

DRAFT → SUBMITTED → APPROVED, or REJECTED → DRAFT. Approvers may adjust hours with an audit trail.

Agreement (7.3A.2)

DRAFT → ACTIVE → EXPIRED, or CANCELLED. Only ACTIVE agreements can be linked.

Procurement requisition (7.5.6A)

SUBMITTED → APPROVED / PROCUREMENT_IN_PROGRESS → FULFILLED, or ALTERNATIVE_SUGGESTED, or REJECTED.

Inspection result (7.12.4)

PASS → ship. CONDITIONAL → EM acknowledges. FAIL → INSPECTION_FAILED: substitute, work order or cancel the line.

Certification (7.2.5A)

ACTIVE (green) → EXPIRING (amber, 30 days before) → EXPIRED (red).

Postings and transfers

Direct cost, inventory consumption and transfers: PENDING → POSTED / COMPLETED, or FAILED (retry).

7 Scenarios and flows

Every path the FDD describes, including the decision points DP-01 to DP-10. Each flow reads left to right; amber boxes are decisions, green boxes are the outcome.

PROJECT MANAGER · EQUIPMENT MANAGER · WAREHOUSE · PROJECT SITE · FINANCE · TIMEKEEPER · TIME APPROVER · CUSTOMER · EQUIPRITE · ORACLE FUSION · SCHEDULED JOB · SYSTEM ADMIN · ANY USER

Request & approval (Phase 2)

S01 Project request, serial items allocated at approval (main path)

When: Projects module on. Equipment is serial or lot controlled. FDD 5.2, 7.5, 7.8, 7.11

PROJECT MANAGER: Builds a cart from the catalog or a template → PROJECT MANAGER: Sets project, task and dates; submits → EQUIPRITE: Checks rate schedule, dates, project/task →

Rate schedule found?
Yes status IN_PROCESS, NTF-01 to EM
No blocked, stays DRAFT (DP-01)

→ EQUIPMENT MANAGER: Opens it from the Workbench in Approve & Allocate → EQUIPMENT MANAGER: Auto Allocate or picks serials, with the schedule embedded →

EQUIPRITE: Soft reserve (light blue) → EQUIPMENT MANAGER: Approves → **APPROVED; appears on Initiate Picking**

- Approve is enabled only when every serial/lot line is allocated (or deferred) and every non-serial line passes the quantity check (DEC-05).
- Auto Allocate looks in the Available subinventory for serials not booked in the date range.
- The schedule in Approve & Allocate is pre-filtered to the line's equipment (DEC-06).
- Approve & Allocate is reached only from the Workbench; there is no separate tile.

S02 Allocation deferred to the warehouse

When: The EM does not want to pick serials in advance. FDD 5.2.1 step 2.3, 7.16.5

EQUIPMENT MANAGER: Approves without allocating serial lines → EQUIPRITE: Transfer Order created without serial numbers → WAREHOUSE: Picks the actual serial on the Oracle mobile app →

Serial known from the pick; flow continues as S01

- Allocation at approval is optional for serial/lot items.
- Partial allocation is allowed: some lines pre-allocated, others left for picking.

S03 Non-serial and bulk items (quantity check)

When: Consumables, scaffolding, small tools: quantity-tracked items. FDD 5.2.2, 7.2.6

PROJECT MANAGER Adds quantity-based items to the cart → **EQUIPMENT MANAGER** Opens the request → **EQUIPRITE** Checks available quantity →

Enough on hand?
Yes Approve enabled
No flag unavailable; procurement (S06)
→ APPROVED

- Auto Allocate does nothing for non-serial lines.
- Mixed requests need both conditions (DEC-05).

S04 Request linked to a rental agreement

When: AGREEMENTS_ENABLED = Yes (required on every request when RENTAL_AGREEMENT_MANDATORY = Yes). FDD 7.3A.4, 7.3A.5, 7.3A.6

PROJECT MANAGER Selects an ACTIVE agreement in the request header → **PROJECT MANAGER** Add All from Agreement (default quantities, agreement rates) → **PROJECT MANAGER** Adjusts lines, adds non-agreement items from the catalog →

EQUIPRITE Validates class and project match the agreement scope → **Submitted as S01; agreement rates win**

- Alternative start: on the agreement lines page select lines, click Create Request, enter project, task, dates and location in the pop-up.
- Rate precedence: agreement line rate, then schedule tagged to the agreement, customer + project + class, customer + class, project, class, default.
- Items not on the agreement use standard schedule rates.

S05 Request from a kit template

When: Recurring orders (Standard, Personal, Project-type or Industry templates). FDD 7.5.4

PROJECT MANAGER Use Template, previews the kit → **PROJECT MANAGER** Add All to Cart, or ticks some lines → **PROJECT MANAGER** Can add a second template to the same cart →

EQUIPRITE Suggests templates that contain items added by hand → **Cart fully editable, then submit as S01**

- Template items append to the cart, never replace it.
- Recently used: last 5 templates.
- MAX_TEMPLATE_LINES (default 50); sharing a personal template org-wide may need EM approval (TEMPLATE_SHARE_REQUIRES_APPROVAL).

S06 Equipment not available or not in the catalog: procurement requisition

When: Out of stock, or no such equipment. FDD 7.5.6, 7.5.6A, TC-07

PROJECT MANAGER: Request New Equipment: description, class, qty, needed-by date, justification → EQUIPRITE: Requisition SUBMITTED; NTF-21 to EM → EQUIPMENT MANAGER: Reviews it in the Workbench Procurement tab →

EM decision

Yes Approve & Procure: Fusion purchase requisition, PROCUREMENT_IN_PROGRESS

No Suggest Alternative (deep link) or Reject with reason

→ Requester notified; tracked in My Requisitions

- If the item does not exist at all, the EM first creates it in the Equipment Master.

S07 Rejection and resubmission

When: The EM rejects the request. FDD 5.2.1 step 2.4, 5.6, 7.6.3

EQUIPMENT MANAGER: Rejects with mandatory comments → EQUIPRITE: REJECTED; NTF-03 to the requester → PROJECT MANAGER: Edits the request (allowed in DRAFT and REJECTED only) →

Resubmits: IN_PROCESS

S08 Cancelling a request

When: Requester no longer needs the equipment. FDD 7.6.3, 7.6.4

PROJECT MANAGER: Cancel (DRAFT or IN_PROCESS only) → ANY USER: Confirms in the dialog → Cancelled; cannot be reinstated; hidden unless "Show cancelled"

- Bulk cancel is available from the list.

S09 Two Equipment Managers approve the same request

When: Concurrent edit. FDD DP-09, 13 (optimistic locking)

EQUIPMENT MANAGER: First EM approves or allocates → EQUIPMENT MANAGER: Second EM tries at the same time → "Record locked by [user]": retry after the first finishes

Customers

S10 Internal customer rental (intercompany billing)

When: CUSTOMERS_MODULE_ENABLED = Yes; customer is another legal entity. FDD 3.2, 7.11.2, 7.14A, INT-10

PROJECT MANAGER: Creates the request with Customer instead of Project → EQUIPRITE: Request Source badge = Customer → EQUIPMENT MANAGER: Same Workbench and approve / pick flow →

FINANCE: Posts costs after the period → **IC invoice (INT-10): Equipment Yard LE bills the customer LE**

- Workbench shows project, customer or both lists depending on which modules are on; Request Source filter only when both are on.
- Bulk approve / reject works across mixed project and customer requests.

S11 External customer through the portal (AR invoice)

When: CUSTOMERS_MODULE + EXTERNAL_CUSTOMER + CUSTOMER_PORTAL flags all Yes. FDD 7.18, 10.4, INT-11, INT-12

CUSTOMER: Signs in to the portal (own login, not Fusion) → CUSTOMER: Browses the catalog: names and classes, never serials → CUSTOMER: Cart, dates, delivery location; agreement filled in →

EQUIPRITE: IN_PROCESS; EM notified; source = Customer → EQUIPMENT MANAGER: Same approval and fulfilment flow → FINANCE: Posts costs → **AR invoice (INT-11); customer sees it in My Billing**

- Portal login: 8+ character complex password, 90-day expiry, lock after 5 failures for 30 minutes, 30-minute idle timeout, JWT in an HTTP-only cookie.
- Customers see only their own requests and invoices.
- Portal can be switched off for maintenance (CUSTOMER_PORTAL_ENABLED) without affecting internal users.

S12 Equipment Manager orders on behalf of a customer

When: Phone-in or walk-in orders. FDD 7.18.5, 10.4.3

EQUIPMENT MANAGER: Opens the portal with Fusion sign-in → EQUIPMENT MANAGER: Picks the customer: "Acting on behalf of" banner → EQUIPMENT MANAGER: Builds and submits the request; can override rates, set priority, allocate →

Logged as "Submitted by EM on behalf of customer"

Pick, ship & receive (Phase 3)

S13 Initiate Picking (manual)

When: Request is APPROVED and TRANSFER_ORDERS_ENABLED = Yes for the BU. FDD 5.3, 7.16, INT-04/05/06

EQUIPMENT MANAGER: Selects approved requests (whole or by line) → ORACLE FUSION: Transfer Order created (INT-04) → ORACLE FUSION: Inventory hard-reserved (INT-05) → ORACLE FUSION: Pick release (INT-06) → WAREHOUSE: Picks on the Oracle mobile app → PICK_INITIATED, then PICK_RELEASED

- Partial (line-based) picking is supported.
- If pick release fails after the TO exists, retry from the page or Oracle Shipping.

S14 Allocated serial no longer available at picking

When: Serial consumed, damaged or reassigned outside EquipRite. FDD DP-02, DEC-03, 5.3.2

EQUIPMENT MANAGER: Initiate Picking → EQUIPRITE: Reservation fails for one line: exception with serial and reason → EQUIPMENT MANAGER: Re-allocates that line manually →

Retries; request stays APPROVED meanwhile

- No automatic substitution.
- Partial success: TO covers all lines, only successful lines are pick-released.

S15 Automatic picking job

When: Optional scheduled job. FDD 5.3 step 3.2, DEC-08 (see also 7.16.6)

SCHEDULED JOB: Finds approved requests where start date − PICKING_LEAD_TIME_DAYS (default 3) ≤ today → ORACLE FUSION: TO, reservation and pick release, as S13 → **All succeeded?** **Yes** done / **No** failures logged and queued for the EM →

PICK_RELEASED

S16 Inspection before shipping

When: Inspection matrix ticked for the class/subclass at "ship out of yard". FDD 7.12, 7.17.3, DP-03, INT-13

WAREHOUSE
Pick confirmed
→
EQUIPMENT MANAGER
Inspector opens the class checklist, attaches photos, logs defects
→
Result
Yes PASS: EQP INSPECTION COMPLETE, ship. CONDITIONAL: EM acknowledges first
No FAIL: INSPECTION_FAILED
→

EQUIPMENT MANAGER
On FAIL: substitute, create maintenance WO (INT-13) or cancel the line
→
Ship confirm

- Four inspection points per class/subclass: ship out of yard, receive at site, ship out of site, receive at yard.
- No ticks for a class: PICK_RELEASED goes straight to SHIPPED.
- Checklist questions: yes/no, pass/fail, numeric, text or rating; defects rated critical, major, minor or cosmetic.

S17 Ship together or line by line

When: SHIP_ENTIRE_REQUEST_TOGETHER flag. FDD DP-04, 7.16.1

Ship entire request together?
Yes all lines must be pick-confirmed before any ships
No each line ships on its own
→
WAREHOUSE
Ship confirm in Oracle Shipping; Bill of Lading
→
SHIPPED; in transit

S18 Receipt at the site, partial receipt and discrepancies

When: Equipment arrives at the project or customer site. FDD 5.3 steps 3.6–3.7, DP-05, INT-07

PROJECT SITE
Receives each line (INT-07)
→
EQUIPRITE
Line becomes DEPLOYED; billing clock starts; NTF-05
→
Received qty = shipped qty?
Yes continue
No line flagged; EM reships the shortage or adjusts the quantity
→

Header DEPLOYED when all lines received

- Open item OI-01: does billing start at dispatch or at receipt?

S19 Transfer orders switched off (tracking only)

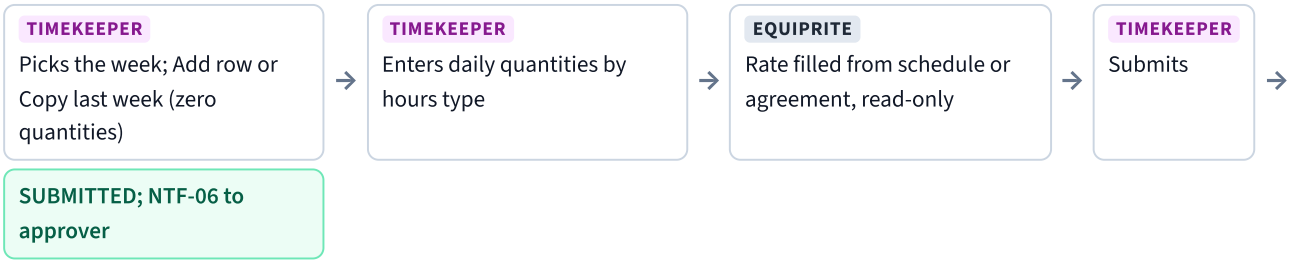

When: TRANSFER_ORDERS_ENABLED = No for the business unit. FDD 3.3, 7.17.2

PROJECT MANAGER
Requests as usual
→
EQUIPMENT MANAGER
Approves
→
No TO, reservation, shipping or receiving integration: EquipRite tracks requests and usage only

Usage, costing & billing (Phase 4)

S20 Weekly time entry

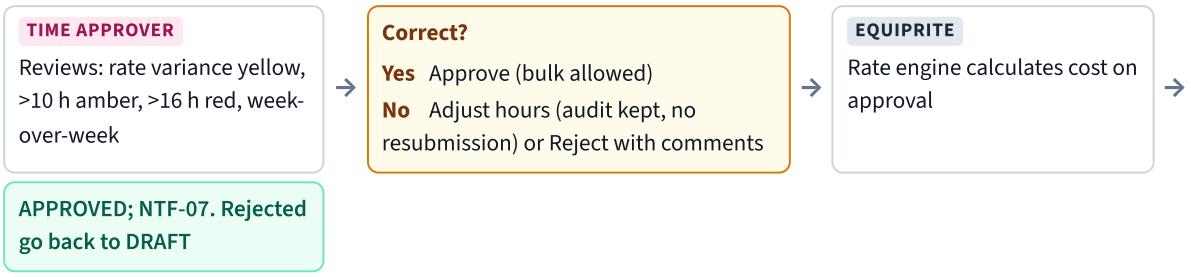

When: Line is DEPLOYED. FDD 7.13, 7.13.2

- Only inside the line's start and end dates; 0–24 per day for hourly items.
- Hours types: Usage, Standby, Idle (billed only if BILL_IDLE_TIME), Overtime (auto-split above the threshold, multiplier applied), Mobilization/Demobilization (flat fee).
- Idle/Standby rows take a downtime reason (weather, crew unavailable, awaiting parts, maintenance, other).
- Day-level notes are allowed.

S21 Timesheet approval, adjustment and rejection

When: Timesheets SUBMITTED. FDD 7.14, 7.14.3, 7.14.4

- Bulk approve of 50 timesheets must finish within 10 seconds (TC-08).

S22 Budget warning on approval

When: Cumulative cost would pass the budget threshold (default 90%). FDD DP-06

S23 Rate engine

When: Every approved timesheet. FDD 7.3.6, 7.3.7

EQUIPRITE Total duration: request dates (Complete Period) or approved hours (Utilized Duration) → **EQUIPRITE** Finds the period whose threshold range holds the total → **EQUIPRITE** Cost = bill rate × number of periods →

Example: 80 h, Weekly from 40 h = 2 × weekly rate

- Six fixed periods: Hourly, Daily, Weekly, Monthly, Quarterly, Yearly; thresholds in hours or days (basis).
- Above the last threshold the longest period applies.
- Complete Period prorates partial periods at the next lower rate.

S24 Posting costs and billing

When: Request period over and all timesheets approved. FDD 7.14A, INT-08/09/10/11

FINANCE Opens Post Costs; previews the breakdown → **FINANCE** Posts (one or many) → **ORACLE FUSION** PPM expenditure items with the configured transaction source →

Customer type
Yes internal: IC billing (INT-10)
No external: AR invoice (INT-11)
→ **GL entries; not reversible in EquipRite**

- Billing frequency WEEKLY, MONTHLY or ON_RETURN (default MONTHLY), overridable per agreement.
- Cost source can be EquipRite rates or PPM rates (COST_SOURCE).

S25 Direct cost and inventory consumption

When: Fuel, lubricants, consumables against an active request. FDD 7.9.1A, 7.9.2A, INT-16, INT-17

PROJECT MANAGER Selects the request: project and task filled in → **PROJECT MANAGER** Direct cost (raw or defined) or inventory consumption lines → **ORACLE FUSION** Expenditure item (INT-17) or misc. issue (INT-16) →

NTF-15 / NTF-14; failed postings can be retried

- Pages controlled by ENABLE_DIRECT_COST_POSTING and ENABLE_INVENTORY_CONSUMPTION.

Return, transfer & settlement (Phase 5)

S26 Return and final settlement

When: Work finished; line DEPLOYED. FDD 5.5, 7.6.3, DEC-04

PROJECT MANAGER Initiate Return; NTF-08 to EM → **ORACLE FUSION** Return TO: site → yard; ship from site → **WAREHOUSE** Receive at yard; post-return inspection →

Damage?
Yes Maintenance subinventory, WO, damage charges
No Available subinventory →

FINANCE Billing stopped, usage reconciled, final charges posted →

RETURNED, then CLOSED

- Open item OI-04: do damage charges need their own approval?

S27 Overdue return

When: End date passed with no return started. FDD DP-07, NTF-16

EQUIPRITE NTF-16 to PM and EM; billing continues → **EQUIPRITE** After OVERDUE_RETURN_GRACE_DAYS (default 7) → **Escalates to the PM's manager and Finance**

S28 Inter-project transfer

When: ENABLE_INTER_PROJECT_TRANSFER = Yes; move equipment site to site. FDD 7.16A, INT-18, NTF-12

EQUIPMENT MANAGER Source request (DEPLOYED) and destination request (APPROVED) → **EQUIPRITE** Checks class/name match, dates in both periods, open timesheets → **ORACLE FUSION** Inter-org transfer (INT-18) →

Source line reduced or RETURNED; destination DEPLOYED; schedule and location updated; NTF-12

- Equipment Managers only; no extra approval.
- Serial/lot items transfer one to one.

S29 Agreement expires while equipment is out

When: Agreement end date passes during deployment. FDD DP-08, NTF-09, RPT-16

EQUIPRITE Earlier: "Agreement expiring" notice to Finance and PM → **EQUIPRITE** On expiry: EM notified; line flagged "Agreement Expired" → **Billing continues at standard schedule rates**

- Open item OI-12: auto-renew or manual renewal?

Equipment master & schedule

S30 Syncing equipment from Fusion

When: New or changed items, assets, work orders. FDD 7.2.6, 7.2.6A, INT-01, INT-15

How much?
Yes Cloud Import: full sync
No Sync Selected (list) or Refresh from Fusion (detail)

→ ORACLE FUSION: Inventory, Fixed Assets and Maintenance read

→ Last Synced updated; failures shown inline with Retry, others kept

- Never-synced records show "Never Synced" in amber.
- Maintenance work orders also sync every 15 minutes (MAINTENANCE_SYNC_INTERVAL_MINUTES).

S31 Expired certificate or maintenance window

When: Requesting or allocating such equipment. FDD 7.2.5A, 7.2.5B, 7.2.6

Certificate expired (RED)?
Yes confirmation; EM override needs a justification
No continue

→ **Open maintenance work order overlaps the dates?**
Yes cannot allocate without EM override
No allocate

→ Amber warning starts CERTIFICATION_EXPIRY_WARNING_DAYS (default 30) before expiry

S32 Schedule conflict

When: Two bookings overlap for a serial item. FDD 7.10.2, NTF-17, RPT-04

EQUIPRITE: Both bars get a red border and conflict icon; NTF-17 to EM

→ EQUIPMENT MANAGER: Opens the conflict panel

→ Reassign one request to a substitute, or change dates

- Bars: light blue soft reserve #90CAF9, dark blue hard reserve #1565C0, grey returned, orange hatched maintenance.

S33 Watching equipment

When: ENABLE_EQUIPMENT_WATCH = Yes. FDD 11.1, INT-19

ANY USER: Clicks Watch on an equipment record

→ EQUIPRITE: Status, location, certificate, maintenance and allocation events

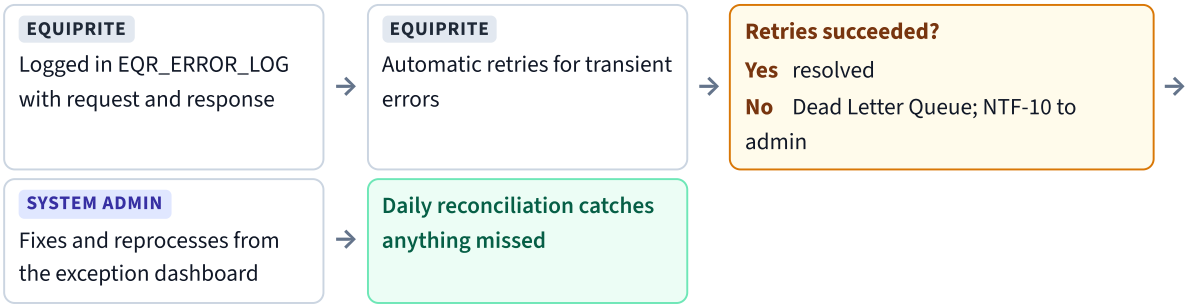

→ Bell and email; manage in My Subscriptions

- Up to 50 items per user (MAX_EQUIPMENT_WATCH_COUNT).
- EMs get all events for their inventory orgs without subscribing.

Integrations & errors

S34 A Fusion or OIC call fails

When: Any outbound integration. FDD DP-10, 9.1–9.4

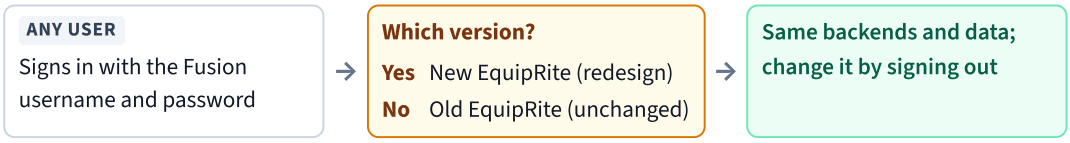

- Retry: HTTP 5xx 3 times with exponential backoff; 429 per Retry-After; timeout 3 × 5 s; 409 lock 3 × 2 s.
- Alerts: circuit breaker open, >10 errors of one code per hour, DLQ >10, exception pending >48 h, reconciliation mismatch, job failure, API >5 s.

New app: old and new versions

S35 Choosing Old or New EquipRite at sign-in (redesign)

When: Desktop app sign-in window. FDD Redesign, not in the FDD

- Both versions read and write the same data: an approval in one shows in the other.
- In VBCS the two versions are two web apps in the same project, each with its own address.

8 Integrations (8.1)

ID	INTEGRATION	FUSION MODULE	METHOD	DIR.	TRIGGER	PURPOSE
INT-01	Equipment Master Sync	Inventory + Fixed Assets	REST	In	On demand	Items, assets, serial/lot, on-hand into the master
INT-02	Project / Task LOV	PPM	REST	In	Real time	Active projects and tasks for requests
INT-03	Serial / Lot Availability	Inventory	REST	In	On allocation	Available serials and lots, existing reservations
INT-04	Transfer Order Create	Order Management	OIC	Out	Initiate Picking	Inter-org TO, yard → site
INT-05	Inventory Reservation	Inventory	REST	Out	Initiate Picking	Hard reserve TO lines
INT-06	Pick Release	Shipping	REST	Out	Initiate Picking	Release the TO for picking
INT-07	Inventory Receipt	Inventory	REST	Out	On receive	Receipt at the project site org
INT-08	Expense Transaction	PPM Costing	REST	Out	On submit	Equipment expense items to project cost
INT-09	Inventory Transaction	PPM Costing	REST	Out	On submit	Inventory issue transactions to project
INT-10	IC Billing	Cost Management	OIC scheduled	Out	Periodic	Intercompany invoices for internal customers
INT-11	AR Invoice	Receivables	REST / OIC	Out	Periodic	Invoices for external customers (agreements + external flags)
INT-12	Customer LOV	AR Customers	REST	In	Real time	External customer lookup
INT-13	Maintenance WO	Maintenance Cloud	REST	Out	On inspection	Work orders from failed inspections
INT-14	Analytics Extract	OTBI / BIP	Extract	Out	Scheduled	Utilization and cost KPIs
INT-15	Maintenance Work Orders	Maintenance	REST	In	On demand + every 15 min	Maintenance light and schedule blocks
INT-16	Project Misc. Issue	Inventory	REST	Out	On submit	Inventory consumption page
INT-17	Direct Cost Posting	PPM	REST (Transaction Import)	Out	On submit	Raw or defined cost expenditure items
INT-18	Inter-Org Transfer	Inventory	REST	Out	On submit	Site-to-site transfers
INT-19	Fusion Notifications	BPM notifications	REST	Out	Event	Equipment Watch bell and email

ID	INTEGRATION	FUSION MODULE	METHOD	DIR.	TRIGGER	PURPOSE
INT-20	User Inventory Org Security	Fusion Security	REST	In	On login (cached)	Orgs for the Region filter

Fusion objects used (6.2)

Inventory items, serial numbers, lot numbers, fixed assets, customer accounts, projects and tasks, transfer orders (supplyOrdersForOrderOrchestration), shipments, receiving receipts, project expenditure items, receivables invoices, intercompany transactions (OIC).

> In today's app these are reached through the VBCS service connections in services/catalog.json: EquipRite REST (eqpt, commonService), Fusion REST and BI Publisher reports (fusion, bipService, callPWPBIP) and OIC (ics). The new app reuses the same connections.

9 Errors, retries and monitoring (9)

CODE GROUP	LAYER	EXAMPLES
EQR-VAL-001–004	UI validation (warning)	Missing field; end date before start; bill rate below cost; duplicate rate line
EQR-BIZ-001–006	Business logic (error)	Not available; budget insufficient; agreement expired; no rate schedule; >24 h a day; duplicate timesheet
EQR-API-001–006	REST API	400, 401/403, 404, 500 (critical), 409 lock, 30 s timeout (critical)
EQR-OIC-001–003	OIC flow	TO creation (critical), IC billing (critical), shipping
EQR-SCH-001–002	Scheduled job	IC billing job failed; orphan records in sync

Severity (9.1.3)

- CRITICAL: blocks the process; email to admin + EM; 3 auto-retries
- ERROR: one transaction; email + in-app; retry for API errors
- WARNING: in-app only
- INFO: audit only

Recovery (9.3)

- Automatic retry by error type, then exception dashboard
- Manual reprocessing by integration
- Dead Letter Queue for permanent failures
- Reconciliation: request ↔ TO, timesheet ↔ PPM, ship ↔ on-hand (daily); billing ↔ GL (weekly); agreement billing ↔ usage (monthly)

Integration health page (9.4.1)

- A card per integration: healthy / degraded / down, last success, 24 h success rate
- 30-day error trend
- Exception queue by severity and age
- Scheduled job monitor
- API response times, flag above 3 s

Targets (9.4.3)

- Success rate 99.5%+
- Detect in < 5 min; resolve critical < 4 h, error < 24 h
- 95% of exceptions resolved in 48 h
- DLQ < 5 at month end
- Reconciliation pass 98%+; auto-retry success 85%+

10 Notifications (11)

ID	EVENT	TO	CHANNEL
NTF-01	Request submitted	Equipment Manager	Email + in-app
NTF-02	Request approved	Project Manager	Email + in-app
NTF-03	Request rejected (with reason)	Project Manager	Email + in-app
NTF-04	Inspection complete	Equipment Manager	In-app
NTF-05	Received at site, billing started	Project Manager	Email + in-app
NTF-06	Timesheets submitted	Approver	Email + in-app
NTF-07	Timesheets approved	Project Manager	In-app
NTF-08 *	Return initiated / certificate expiring (30 and 7 days)	EM / EM + watchers	Email + in-app
NTF-09 *	Agreement expiring / certificate expired	Finance + PM / EM + watchers	Email
NTF-10 *	Integration failure / maintenance WO created	Admin / watchers	Email
NTF-11	Maintenance WO completed	Watchers	Bell + email
NTF-12	Inter-project transfer completed	Both PMs + EM	Bell + email
NTF-13	Watched equipment status change	Watchers	Bell + email
NTF-14	Inventory consumption posted	Project Manager	Bell + email
NTF-15	Direct cost posted	PM + Finance	Bell + email
NTF-16	Overdue return	PM + EM	Bell + email
NTF-17	Schedule conflict detected	Equipment Manager	Bell + email
NTF-21 *	Procurement requisition submitted	Equipment Manager	Not specified

* The FDD uses these IDs for two different events, or does not define them in section 11 (see section 17).

11 Reports (7.15)

All reports share one filter bar: region/org, date range presets, class/subclass, equipment, project, customer, status, location; filter sets can be bookmarked; export to Excel. Delivery: VBCS dashboards (live), OTBI (ad-hoc, cross-module) and BIP (formatted PDF/Excel, scheduled email).

ID	REPORT	TECHNOLOGY	AUDIENCE
RPT-01	Equipment Fleet	VBCS dashboard	All roles
RPT-02	Request and Approval	VBCS dashboard	EM, Ops Lead, PM
RPT-03	Equipment Utilization	VBCS + OTBI	EM, Finance, Ops Lead
RPT-04	Schedule Conflict	VBCS dashboard	EM
RPT-05	Cost Analysis	VBCS dashboard	Finance, PM, EM
RPT-06	Cost vs. Budget	OTBI	PM, Finance
RPT-07	Rate Schedule	BIP (monthly email)	Finance
RPT-08	Timesheet Summary	VBCS + BIP (weekly email)	PM, Finance
RPT-09	Intercompany Billing Summary	OTBI	Finance
RPT-10	Maintenance History	BIP	EM
RPT-11	AR Invoice	BIP (monthly)	Finance, external customers
RPT-12	Return and Settlement	VBCS + BIP	PM, EM, Finance
RPT-13	Certification Compliance	BIP (monthly email)	EM, Safety
RPT-14	Transfer History	VBCS	EM, Ops Lead
RPT-15	Overdue Equipment	VBCS (daily)	EM, PM, Finance
RPT-16	Agreement Expiry	VBCS (weekly)	Finance, EM
RPT-17	Integration Error and DLQ	VBCS (Integration health)	System admin
RPT-18	Timesheet Detail	BIP	PM, Finance, auditors
RPT-19	Equipment Downtime Analysis	VBCS dashboard	EM, Ops Lead, PM
RPT-20	Utilization vs. Revenue	VBCS dashboard	EM, Finance, Executive

12 Configuration settings (7.17)

Three tabs: **Administration** (system settings, flags, role mapping, rate types, cost source), **Warehouse** (yard operations, picking, shipping, inspection, documents) and **Project Site** (receiving, acceptance, site inventory). Defaults in brackets.

AREA	SETTINGS
Modules	PROJECTS_MODULE_ENABLED (Yes), CUSTOMERS_MODULE_ENABLED (No), AGREEMENTS_ENABLED (No), EXTERNAL_CUSTOMER_ENABLED (No), CUSTOMER_PORTAL_ENABLED (No), RENTAL_AGREEMENT_MANDATORY (No)
Fulfilment	TRANSFER_ORDERS_ENABLED per BU (No), SHIP_ENTIRE_REQUEST_TOGETHER (No), PICKING_LEAD_TIME_DAYS (3), SHIPPING_DOCUMENTS_ENABLED (Yes), OTM_INTEGRATION_ENABLED (No), inspection matrix per class/subclass × 4 points
Costing & billing	COST_SOURCE (EquipRite rates), DEFAULT_BILLING_FREQUENCY (Monthly), WEEK_END_DAY (Friday), EXPENDITURE_BATCH_PREFIX, AD_HOC_TIMESHEETS_ENABLED (No), BILL_IDLE_TIME, ENABLE_DIRECT_COST_POSTING (Yes), ENABLE_INVENTORY_CONSUMPTION (Yes), transaction source and sequence prefix
Approval	ADDITIONAL_PROJECT_APPROVAL_ENABLED (No), approval thresholds by class and value (OI-02)
Equipment	MAP_LOCATION_CAPTURE_ENABLED (No), ENABLE_EQUIPMENT_WATCH (Yes), MAX_EQUIPMENT_WATCH_COUNT (50), MAINTENANCE_SYNC_INTERVAL_MINUTES (15), CERTIFICATION_EXPIRY_WARNING_DAYS (30), SOFT_RESERVE_COLOR (#90CAF9), HARD_RESERVE_COLOR (#1565C0)
Requests & templates	ENABLE_INTER_PROJECT_TRANSFER (Yes), MAX_TEMPLATE_LINES (50), ENABLE_INDUSTRY_TEMPLATES (Yes), TEMPLATE_SHARE_REQUIRES_APPROVAL (Yes), OVERDUE_RETURN_GRACE_DAYS (7), budget warning threshold (90%)
Region filter	DEFAULT_REGION_FILTER_BEHAVIOR (SINGLE)
Master lists	Equipment classes and subclasses, rate types (Usage, Mobilization, Return, Standby + custom), role mapping to Fusion role codes, BU → yard / site / customer-site org mapping, project-site sub-inventories and locators

13 Data model (6)

CUSTOM BUSINESS OBJECT	HOLDS
EQR_EQUIPMENT_MASTER	Equipment with links to Fusion item, asset, maintenance asset
EQR_EQUIPMENT_CLASS	Classes, subclasses and their inspection points
EQR_EQUIPMENT_CERTIFICATION	Certificates per equipment
EQR_EQUIPMENT_WATCH / EQR_NOTIFICATION_SUBSCRIPTION	Watches and notification preferences
EQR_RATE_SCHEDULE / EQR_RATE_PERIOD_LINE	Rate headers and period lines with thresholds
EQR_AGREEMENT_HEADER / EQR_AGREEMENT_LINE	Rental agreements and lines
EQR_EQUIPMENT_REQUEST / EQR_REQUEST_LINE	Requests and lines with allocation
EQR_REQUEST_TEMPLATE / EQR_TEMPLATE_LINE / EQR_TEMPLATE_VERSION	Kit templates and history
EQR_PROCUREMENT_REQUISITION	New-equipment requests
EQR_TIME_ENTRY	Weekly timesheets
EQR_INSPECTION / _CHECKLIST / _RESPONSE / _DEFECT	Inspections, questions, answers, defects
EQR_TRANSFER_HISTORY	Inter-project transfers
EQR_INVENTORY_CONSUMPTION / EQR_DIRECT_COST_TXN	Project consumption and direct costs
EQR_SAVED_SEARCH	Saved filters
EQR_CUSTOMER_PORTAL_USER	Portal logins
EQR_CONFIG_SETTINGS / EQR_BU_ORG_MAPPING	Settings and org mapping
EQR_ERROR_LOG / EQR_DEAD_LETTER_QUEUE / EQR_JOB_RUN_LOG	Errors, failed transactions, job runs

14 Quality, migration and testing (13–15)

AREA	TARGET
Page load	< 3 s (95th percentile); BR-014 says ≤ 2 s
Search	< 2 s for 10,000 records
Dashboard KPIs	< 1 s
Uptime	99.5%
Users	100+ concurrent
Volume	50,000+ requests, 500,000+ timesheet entries
Devices	Tablet 1024 px and up
Accessibility	WCAG 2.1 AA
Integrity	Audit trail; optimistic locking on requests and timesheets

Migration (14): equipment master (500–2,000, FBDI + REST, go-live), rate schedules (10–50, manual/CSV, go-live), active agreements (20–100, manual), historical requests (optional, after go-live). Extract to CSV, validate, load, reconcile counts, sign off.

TEST	SCENARIO	EXPECTED
TC-01	Create, submit, approve; TO in OM	TO with correct orgs and lines
TC-02	Pick, ship, receive	Yard down, site up
TC-03	Timesheet approved	Expenditure item with right rate and task
TC-04	Overlapping rate schedules	Rejected
TC-05	PM opens Approve page	Access denied
TC-06	Return	Billing stops; settlement posted
TC-07	Nothing available	Unavailable badge; procurement flagged
TC-08	Bulk approve 50 timesheets	Within 10 s, costs right

Test phases: unit (DEV), SIT, UAT, performance, security, regression (15.1).

15 Decisions and open items (16)

ID	DECISION
DEC-01	Rate schedules work without agreements; agreements add terms when on
DEC-02	External = third-party via AR invoice (INT-11)
DEC-03	Serial unavailable at picking: EM re-allocates and retries; no auto-substitution
DEC-04	Returns use a reverse TO; no return picking page
DEC-05	Mixed requests: approve when all serial lines allocated and all others pass the quantity check
DEC-06	Schedule embedded in Approve, filtered to the line
DEC-07	Agreement link optional per request
DEC-08	Auto picking uses PICKING_LEAD_TIME_DAYS

OPEN ITEM	QUESTION	OWNER
OI-01	Billing starts at dispatch or receipt?	Functional owner
OI-02	Approval thresholds by class	Equipment Manager
OI-03	IC billing frequency per legal entity	Finance
OI-04	Separate approval for damage charges?	Functional owner
OI-05	FOB point for intransit	Finance
OI-06	Multi-currency rates	Finance
OI-07	Where to store equipment images	Technical lead
OI-08	Auto Allocate priority: utilization, FIFO or nearest	Equipment Manager
OI-09	AR invoice template (BIP)	Finance
OI-10	SLA for failed auto-picks	Operations
OI-11	Split a lot across requests?	Functional owner
OI-12	Agreement renewal: auto or manual	Finance

16 Old app and new app

The redesign is built as a second VBCS web app next to today's app, which stays exactly as it is. Both use the same service connections, so they show and change the same data. In the desktop app the sign-in window offers **Old EquipRite** and **New EquipRite** and opens the one chosen (scenario S35).

TODAY'S APP	NEW APP	CHANGE
Right-edge drawer menu, groups named after personas, no header bar	Header (region filter, search, cart, alerts) + side menu by lifecycle phase	New
Persona dashboards	Home: Equipment Manager, Home: Project Manager (clickable work queues)	Kept
project-create-request, customer-create-req, request-catalog	One New request cart (catalog → project or customer → review)	3 → 1
equipment-requests, customer-my-requests	My requests with a source badge	2 → 1
equipment-request-detail, customer-request-detail, request-detail	Request detail with status tracker	3 → 1
project-quote, customer-quote, request-quote	Quote tab on Request detail	3 → 1
Workbench (Outbound / Deployed / Inbound)	Workbench with To approve, To pick, Procurement added	Kept
Line detail with Bryntum scheduler and Mapbox	Approve & allocate, Schedule	Kept
Pick slip; returns scanner and Direct Return	Initiate picking; Receipt & returns	Kept
post-cost-test, post-cost-test-detail, post-cost, post-cost-detail	Post costs (re-tier, split, misc charges, blackout weeks kept)	4 → 1
equipment-timesheets (no access check)	Time entry, Timesheet approval	Guarded
equipment-record-cost (mock data)	Direct cost & inventory use (real posting)	Finished
Equipment list (Map View inactive), equipment-create (Save inactive), equipment-detail (unreachable)	Equipment, Equipment detail	Finished
customer-rental-contract (unreachable), rental-agreement-create (no access check)	Rental agreements	Finished
configurations (2,578 lines, 81 action chains)	Settings in ten searchable sections	Split
rbac-admin (Page Access)	Settings › Roles & page access	Kept
equipment-analytics, equipment-reports (no access check)	Analytics report library by role	Guarded
Not in today's app	Integration health, Transfer, Inspection, Customer portal	New

Wireframes for every new screen: EquipRite-Redesign-Wireframes.pdf in this folder, and the live canvas at claude.ai/artifact/KPvPbWuSGpWcJ4VTXYBpEU.

17 Inconsistencies to resolve in the FDD

Found while summarising. Each needs a decision before the matching feature is built.

1. Roles differ between sections: 2.1 names five personas (Requester, Project Manager, Equipment Manager, Timekeeper, Time Approver); 10.1 defines four roles (Project Manager, Equipment Manager, Finance/AR, Operations Lead); 7.1.2 adds Warehouse Operator and System Administrator; 10.3 adds External Customer.
2. Notification IDs NTF-08, NTF-09 and NTF-10 are used twice (section 11 table and 11.2). NTF-21 (procurement, 7.5.6A) is not in section 11. BR-014 says 17 event types.
3. Reports are numbered differently in section 12 (RPT-01 to RPT-07) and section 7.15 (RPT-01 to RPT-20). The 7.15 introduction says 15 reports; it defines 20.
4. Retry timing differs: DP-10 says 3 retries at 30 s, 2 min, 10 min; 9.3.1 says 1 s, 3 s, 9 s for HTTP 5xx.
5. Automatic picking: 5.3 step 3.2 and DEC-08 describe an EquipRite scheduled job; 7.16.6 says auto picking is handled by Oracle Fusion standard functionality.
6. Error log integration_id and the health dashboard cards cover INT-01 to INT-10, but there are 20 integrations.
7. Timesheets store Monday–Friday quantities (mon_qty–fri_qty), while WEEK_END_DAY allows Saturday or Sunday week endings.
8. NTF-02 says the Transfer Order is created on approval; since v1.2 it is created at Initiate Picking.
9. The request list status filter (7.6.1) omits PICK_INITIATED, PICK_RELEASED, SHIPPED and CLOSED, and includes CANCELLED, which is not in the status lifecycle (5.6).
10. Performance targets differ: BR-014 says page load ≤ 2 s; section 13 says < 3 s at the 95th percentile.
11. Document control still shows Version 1.3 while the revision history runs to 1.7.
