WIREFRAMES V1 · FROM FDD V1.7

EquipRite, redesigned on Oracle Redwood

One app shell for every role, organised around the five phases of the equipment lifecycle. Each screen below names its FDD section and the Redwood page template it would be built with. Nothing is coded yet: these are for review.

Screens by lifecycle phase

Click a screen to open its wireframe. In Play mode the side navigation on every screen links them together like the real app.

PHASE 1 · SETUP
- Equipment master
- Equipment detail
- Rate schedules
- Rental agreements
- Configuration settings

PHASE 2 · REQUEST & APPROVE
- New request: equipment
- New request: project & review
- My requests
- Workbench
- Approve & allocate
- Equipment schedule

PHASE 3 · PICK, SHIP, RECEIVE
- Initiate picking
- Inspection & ship-out
- Receipt & acceptance
- Request detail (status tracker)

PHASE 4 · USAGE, COST, BILLING
- Time entry
- Timesheet approval
- Post costs
- Direct cost & inventory use

PHASE 5 · RETURN & SETTLE
- Returns
- Inter-project transfer
- Final settlement

Home: Equipment Manager | Home: Project Manager | Analytics | Integration health | Customer portal

What changes from today

One shell, one menu
Header with the global Region / Inventory Org filter (§7.1.1), search, cart and notifications on every page. Side menu grouped by phase; items hide by role and by module flag.

Home is a work queue
KPI bar plus role tiles with live counts (§7.1.2–7.1.3). Every number opens the filtered list behind it.

Requesting is a cart
Three steps: pick equipment from the catalog, set project or customer, review and submit (§7.5). Templates and agreements fill the cart in one click.

One workbench for the Equipment Manager
Tabs by stage: to approve, to pick, in transit, deployed, returns, procurement. Approve & allocate opens from it, with the schedule embedded (§7.8, §7.11).

Status is always visible
A lifecycle tracker on every request (§5.6) and the same status colours, soft/hard reserve blues and source badges on every list.

The old app stays
Today's app is not changed. The sign-in window offers Old EquipRite and New EquipRite and opens the one chosen; both use the same data.

Standard Redwood pages
Lists use the Smart Search page, records the General Overview page, edits a drawer, Home the Dashboard Landing page: the oj-sp templates the app already uses.

What it replaces in today's app

Today's app has 47 pages. The redesign covers the same work in 26 screens. Nothing that works today is dropped: duplicates are merged, dead ends are finished, and pages without an access check get one.

Pages today → screens	Duplicate pages merged	Stubs and orphans finished	Pages that gain an access check
47 → 26	**10**	**7**	**4**

TODAY	BECOMES	CHANGE	NOTES
Right-edge drawer menu, groups named after personas, no header bar	App header + side menu	New	Menu grouped by lifecycle phase; region filter, search, cart and alerts always visible
Persona dashboards (dashboardRoleConfig.js)	Home: Equipment Manager, Home: Project Manager	Kept	Same RT_EQP_* role mapping; tiles become clickable work queues
project-create-request, customer-create-req, request-catalog	New request (catalog → review)	3 → 1	Project or customer is a choice on step 2, not a separate page. EQR_CUST_CATALOG check moves into role access
equipment-requests, customer-my-requests (both titled "My Requests")	My requests	2 → 1	Source badge (Project / Customer) and a filter instead of two lists
equipment-request-detail, customer-request-detail, request-detail	Request detail	3 → 1	One record page with the status tracker; tabs adapt to the source
project-quote, customer-quote, request-quote	Quote tab on Request detail	3 → 1	Quotes keep their PDF; no separate page to find
Workbench with Outbound / Deployed / Inbound tabs	Workbench	Kept	Same tabs, plus To approve, To pick and Procurement
Line detail with Bryntum scheduler and Mapbox allocation	Approve & allocate, Schedule	Kept	Same Bryntum and Mapbox components, now opened from the workbench
Pick slip; returns scanner (barcode/QR) and Direct Return	Initiate picking, Receipt & returns	Kept	Scanner and Direct Return stay as they are
post-cost-test, post-cost-test-detail (live, test names); post-cost, post-cost-detail (unreachable)	Post costs	4 → 1	Keeps re-tier, split across projects, misc charges and blackout weeks
equipment-timesheets (no access check)	Time entry, Timesheet approval	Guarded	Entry and approval split by role, as in FDD 7.13–7.14
equipment-record-cost (mock data)	Direct cost & inventory use	Finished	Posts to Oracle Projects for real (INT-16, INT-17)
Equipment list (Map View does nothing); equipment-create (Save does nothing); equipment-detail (unreachable)	Equipment, Equipment detail	Finished	Working map view, create and edit; Fusion import review stays
customer-rental-contract (unreachable); rental-agreement-create (no access check)	Rental agreements	Finished	Shown only when AGREEMENTS_ENABLED is on
Rate pages	Rate schedules	New	Spreadsheet grid of the six rate periods, margin check and a cost simulator
configurations (2,578 lines, 81 action chains)	Settings	Split	Ten searchable sections; flags show what they depend on and what they affect
rbac-admin (Page Access)	Settings › Roles & page access	Kept	Adds "preview the app as a role"
equipment-analytics, equipment-reports (no access check)	Analytics	Guarded	One report library; each role sees only its reports (7.15.23)
Nothing today	Integration health, Transfer, Inspection, Customer portal	New	FDD screens the app doesn't have yet

The three unused fragments are removed. Page names come from the current webApps/vbredwoodapp code.

Who sees what

From the FDD page access matrix (§10.3) and dashboard tiles by role (§7.1.2). "Own" means the user's projects only.

MENU GROUP	PROJECT MANAGER	EQUIPMENT MANAGER	WAREHOUSE	FINANCE	OPS LEAD	ADMIN
Request	Full (own)	View all	None	View	Edit (assigned)	View
Fulfil (workbench, approve, pick, inspect)	Schedule view	Full	Pick, inspect	Workbench view	Workbench, schedule	View
Usage & cost	Time entry, approve own	View	None	Approve all, post costs	View	View
Master data	View	Equipment full, rates view	Equipment view	Rates and agreements full	View	Full
Insights	Own projects	All	None	All	Assigned	All
Settings	None	Full	None	Partial	None	Full

Status colours used on every screen

Draft | In process | Approved | Pick initiated | Pick released | Shipped | Deployed | Returned | Closed | Rejected

Soft reserve | Hard reserve | Maintenance block | PROJECT | CUSTOMER

Screen index

SCREEN	FDD	REDWOOD TEMPLATE	MAIN ACTIONS
Home	7.1, 7.4	Dashboard landing page	KPI bar, role tiles with counts

How the version choice works

The button label follows the choice: "Sign in and open Old EquipRite" or "…New EquipRite".

To change later: **File › Sign out**, or **File › Open Old EquipRite / Open New EquipRite** without signing out.

The window title shows which one is open, so screenshots and demos are never mixed up.

In VBCS

Old and new are two web apps in the same visual application, sharing its service connections. Each has its own address, so users open the one they want from a bookmark; the Oracle login page itself can't be changed.

Modules & features

Projects module [on]
Equipment for internal projects. Uses intercompany billing.

Customers module [on]
Rent equipment to customers. Adds customer requests and quotes.

Rental agreements [on]
Negotiated rates and bulk-add lists. Make agreements mandatory on requests

External customers (Oracle AR) [on]
Needs: Customers module ✓ · Rental agreements ✓

Customer portal CHANGED [on]
Needs: External customers ✓ · Turn off any time for maintenance

Transfer orders & shipping Mixed
Per business unit. On for 2 of 3 BUs. Set per BU

Inter-project transfers [on]
Move equipment between projects without returning it to the yard.

Extra project approval CHANGED [off]
Adds a PM approval before the Equipment Manager. Affects 17 open requests.

Inspection points

7.17.3

CLASS · SUBCLASS	YARD OUT	SITE IN	SITE OUT	YARD IN
Excavators · all	✔	✔		✔
Cranes · mobile	✔	✔	✔	✔
Generators · all				✔
Light towers · all				

Click a cell to switch it. No ticks: no inspection step for that class.

Roles & page access

7.17.2B, 10.3

EQUIPRITE ROLE	FUSION ROLE CODE	PAGES
Requester	RT_EQP_REQUESTER	8
Project manager	RT_EQP_PROJECT_MGR	11
Equipment manager	RT_EQP_EQUIP_MGR	24
Timekeeper	RT_EQP_TIMEKEEPER	3
Time approver	RT_EQP_TIME_APPROVER	4

Every page checks access the same way, including the 4 pages that have no guard today. Preview the app as a role
